1. Current work at the Gema plant in Berlin-Köpenick, now operating as SMA Technical Bureau No. 11, and at the SMA Schraubenfabrik in Berlin-Oberschöneweide, is expected to end about the middle of March. 25X1X

[REDACTED] the
Schraubenfabrik was engaged in the development of high frequency tubes, with more than 100 German workers employed under the supervision of three or four Russian officers using civilian cover.

25X1X

2. [REDACTED] two new technical bureaus were established by the Russians. Personnel, some speaking Russian and some German, were hired to evaluate drawings from Siemens, EFEM, AEG, and Gema; they were instructed to select those which might be of future use and to make copies of material analyses and component formulas. The two bureaus are located at Rodelbergweg 6 in Berlin-Baumschulenweg and Bismarckstrasse 18, Berlin-Oberschöneweide.
3. A letter received from former chief engineer Blasig of Gema, now in Moscow, indicated that Gema's department for gyro equipment and controls is located in the latter city. The letter states that specialists are being treated well, but that necessary technical equipment is lacking. Factories are planning experimental assembly line production of equipment developed by Gema. The letter intimates that the Germans are closely guarded at all times and that their dependents are confined to residence compounds.
